

Portfolio Output: My Workflow & Operating System

1. Workflow Structure

- Intake & Planning:
 - Gather client requirements and define project scope.
 - Set clear goals and measurable KPIs.
- Execution:
 - Break down deliverables into milestones.
 - Assign tasks and track progress using Trello/Notion.
- Review:
 - Conduct quality checks before submission.
 - Collect feedback and adjust as needed.
- Delivery:
 - Submit final deliverables with documentation.
 - Hold a wrap-up session to confirm satisfaction.

2. Task Prioritization

- Urgent & Important: Deadlines, client deliverables.
- Important but Not Urgent: Skill development, long-term projects.
- Delegated/Automated: Routine tasks handled by tools or systems.
- Deferred: Non-critical items scheduled for later.

(I use the Eisenhower Matrix to decide what gets immediate attention vs. what can wait.)

3. Systems for Effective Operations

- Project Management Tools: Trello, Notion, Asana for task tracking.
- Communication Channels: Slack, Zoom, Email for updates and collaboration.
- Documentation: Google Drive & GitHub for storing files and version control.

- Feedback Loop: Post-project reviews and client surveys to refine processes.
- Continuous Learning: Weekly time dedicated to new tools and industry trends.

4. Concrete Example

During the Full Body Personality Walk assignment, I:

- Structured my workflow by breaking the animation into phases (blocking → refining → polishing).
- Prioritized tasks by focusing first on body mechanics before adding personality details.
- Used systems like Trello to track progress and GitHub to share files.
- Implemented a feedback loop by reviewing playblasts and adjusting based on critique.

This ensured the project was delivered on time, with both technical accuracy and creative expression.

5. Reflection

By documenting my workflow, prioritization, and systems, I've built a repeatable operating model that ensures consistency, accountability, and growth across all projects.
